Index	19

CHAPTER

ONE

OVERVIEW

docs	
tests	
package	0.0.0 wheel supported-versions supported-implementations

A package to process data derived from qsiprep pipeline

- Free software: Apache Software License 2.0

1.1 Installation

```
pip install qsiprep_analyses
```

You can also install the in-development version with:

```
pip install https://github.com/niparser/qsiprep_analyses/archive/master.zip
```

1.2 Documentation

https://qsiprep_analyses.readthedocs.io/

1.3 Development

To run all the tests run:

```
tox
```

Note, to combine the coverage data from all the tox environments run:

Windows	<pre>set PYTEST_ADDOPTS=--cov-append tox</pre>
Other	<pre>PYTEST_ADDOPTS=--cov-append tox</pre>

**CHAPTER
TWO**

INSTALLATION

At the command line:

```
pip install connectome-plasticity-project
```

**CHAPTER
THREE**

USAGE

To use qsiprep_analyses in a project:

```
import qsiprep_analyses
```

**CHAPTER
FOUR**

REFERENCE

4.1 qsiprep_analyses

QSIPrep utilities and derivatives.

CONTRIBUTING

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

5.1 Bug reports

When [reporting a bug](#) please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

5.2 Documentation improvements

`qsiprep_analyses` could always use more documentation, whether as part of the official `qsiprep_analyses` docs, in docstrings, or even on the web in blog posts, articles, and such.

5.3 Feature requests and feedback

The best way to send feedback is to file an issue at https://github.com/niparser/qsiprep_analyses/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

5.4 Development

To set up *qsiprep_analyses* for local development:

1. Fork [qsiprep_analyses](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:YOURGITHUBNAME/qsiprep_analyses.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you’re done making changes run all the checks and docs builder with `tox` one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .  
git commit -m "Your detailed description of your changes."  
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

5.4.1 Pull Request Guidelines

If you need some code review or feedback while you’re developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run `tox`)¹.
2. Update documentation when there’s new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- pytest -k test_myfeature
```

To run all the test environments in *parallel*:

```
tox -p auto
```

¹ If you don’t have all the necessary python versions available locally you can rely on Travis - it will [run the tests](#) for each change you add in the pull request.

It will be slower though ...
